

ASSIGNMENT 2: TESTING GUIDE

1. Submitting Your Assignment for Compatibility Check

To ensure your assignment is compatible with the provided test cases, follow these steps:

1. Access the Submission Link:

Click on the following link to submit your assignment: [GitHub Classroom Assignment Link](#)

2. Select Your Student ID: After accessing the link, select your corresponding Student ID. This will automatically generate a repository for you on GitHub.
3. Clone the Repository: Clone your assigned repository to your local machine using:

```
git clone <your-repo-url>
```

Replace <your-repo-url> with the actual URL of your GitHub repository.

2. Implementing the Required Files

You need to complete the implementation of the following four required classes:

- `HoseAdapter.java`
- `StockFeeder.java`
- `StockAlertView.java`
- `StockRealtimePriceView.java`

3. Running the Automated Tests

After completing your implementation, push your code to GitHub, where automated tests will validate your solution. Follow these steps to commit and push your code:

1. Add all files to Git tracking: `git add .`
(You can use `git status` to check the status of your current files.)
2. Commit your changes: `git commit -m "your message"`
3. Push the code to GitHub: `git push -u origin main`
4. Check the Automation Test Status:
 - Visit your repository on GitHub.
 - Check the **Actions** tab for the automated test results.
 - If all test cases pass, you will see a success message indicating that you have passed all required tests.

4. Debugging and Fixing Issues

If your code fails any test cases:

- Read the error messages provided in the GitHub Actions output.
- Ensure that your implementations meet the expected behavior outlined in the assignment.
- Modify your code and push the changes again to trigger a new test run.
